

Hello Everyone,

The club had several power-points today from our key speakers and GPS/SEPA research group. *This particular set of minutes is under-represented.* The secretary was absent for the majority of the presentations and offers an apology to the Speakers and to the members who could not make it to the meeting.

In addition to **Casey Holcom** and **Bryant Bush**'s presentation on **Industrial/Organizational Psychology**, our own **undergraduates** explained their presentation on **Tattoo Acquisition Study** that will be featured in the upcoming psychological conventions. They discussed how the perception of tattoos has changed over time, the leading motivators of tattoo on campus, the leading motivators of tattoos in general, the amount of tattoos that certain portions of the sample attained, and how significant their study was in some of its findings.

Club Matters

The Cognitive Neuroscience of Zombies (*Ataxic neurodegenerative satiety deficiency syndrome*) will be discussed in next week's event. Photos of the brain, the effects of infection and assumptions on the neural damage in zombies will be taught to celebrate Brain Awareness Week. Pizza will be provided

Upcoming Events

Mar 12-Brain Awareness Week by Blaine Browne in 1302 Psych Building
-GPS paper submissions cut-off date.

Your regretful secretary,

Gina-Marie Guyette

Psychology Major, Theatre Minor,
Valdosta State University
